Questions? Call Charles DeVore at 503-641-4510

SATURDAY MORNING LEOPARD

What's new in this version of the Macintosh Operating System and why you will be excited to run it. The class will explore the new features, discuss hardware requirements and possible problems with older programs. Please note: if Leopard is not released prior to MacCamp we will be using information gleaned from Apple and sites that have leaked information.

SATURDAY MORNING GARAGEBAND

What's in the latest updates, where to put those Jam Packs that Apple sells you and why you should install them. There is more to this program than just making music. Join us to learn all the tricks and secrets.

SATURDAY AFTERNOON ENTOURAGE

Microsoft puts this program in every Office package. What is it good for, why you may want to use it, and how do you set it up. It's not just an email program, it's a contact database. But wait there's more! Come to the class and find out.

SATURDAY AFTERNOON IPHOTO

Tricks, tips and how-tos. Learn how to use the more advanced features to get your pictures just right. People attending this class should already know iPhoto basics and have the latest version installed on their computer.

SATURDAY EVENING

Rob Griffiths, Macworld Contributing Editor and the founder of MacOSXHints.com, will host a 20-question Jeopardy-style quiz he used at Expo this year. He will point out 20 things that OS X can do, then ask the crowd if they know how. Then he will demonstrate that answer, so everyone learns. This will be an 8:00PM session so it does not conflict with the other classes.

SUNDAY MORNING IWEB

Need a quick web page and have a .Mac account? iWeb is the perfect tool for you. This program lets you

set up a web page in no time at all. Even without Internet access, we will guide you through the process and answer questions. And you don't have to have a .mac account!

SUNDAY MORNING SYSTEM PREFERENCES

We are calling this System Prefs Part Two due to the fact our instructor ran short of time when giving this class last year so he'll cover what was missed and then do a refresher course on what things have been updated or changes since the last class.
